of your products through the Datamanager software from Mekitec. Paperless digital recording of foreign object validations.

+

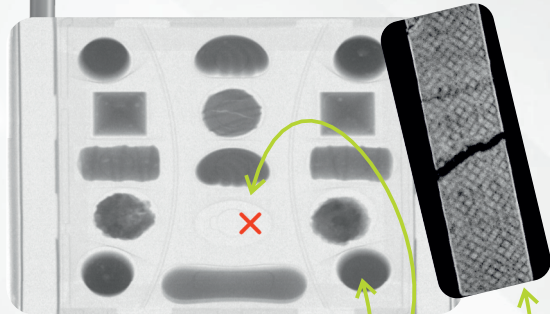

Mekitec SPECIAL

Inline quality control:

Completeness check, counting of components, detection of missing or defective products, fill level monitoring and checking the integrity of closures.

All functions
1 DEVICE

Traceability through product X-ray images

Primary X-ray inspection

Inline quality control

Broken latch

The advantages

- Primary X-ray inspection
 - smallest foreign bodies
 - A wide variety of materials
- Reliable and versatile
Quality control of your products
- Simplest traceability
of each product
- Any industry standards
- Easy integration into your production
- Compact size

Why upgrade?

Mekitec X-Ray not only detects the smallest and unwanted foreign objects. It sorts out damaged and incomplete products from the manufacturing process and thus automatically ensures the quality of your products.

Added to this is the specially developed traceability software with which every product produced is mapped and stored. This means that the X-ray CCP in connection with the traceability of foodstuffs can be processed in a much more targeted and rapid manner.

... all in one compact system!
